

Emerson College Piano Row Residence Hall

McPhee Electric, Ltd. completed construction of a 14-story residence hall with 600 bedrooms and three additional underground stories, which includes an NCAA tournament regulation basketball court and full-service dining hall for students. The facility is one of only two residence halls to pursue and receive LEED certification in Massachusetts. As the second new construction project in Emerson College's 123-year history, McPhee provided experience and guidance in leading the owner through the project. McPhee installed all site lighting, fire alarm systems, security systems, wiring/cabling, and site preparation. The fast track schedule and demand was met with high numbers of additional manpower, added through multiple work shifts and coordination with suppliers, for just-in-time owner occupancy.
