

Mono-Pine Cell Tower

McPhee Electric, Ltd. has a longstanding relationship with Verizon Wireless which afforded the opportunity to build the Mono-Pine Cell Tower located in picturesque Falls Village, CT. Because this site was on a steep ridge, McPhee had to construct a 140' long x 30' high gabion retaining wall before the overall construction of the site could start. Once the wall was completed, McPhee continued to build the Mono-Pine Cell tower, associated buildings, and new electric service. The concealed tower covers Falls Village along Routes 7, 112, and 126, as well as the neighboring Lime Rock Park in Salisbury.
