

# UConn Medical Cellular Relocation

McPhee Electric, Ltd. was chosen as the general contractor to perform the relocation of Verizon Wireless, T-Mobile, and AT&T at the UConn Medical Center. All three cellular carriers needed to be relocated from the Penthouse onto the roof, all while remaining operational. Compounding the complexity of the project, the UConn building was under complete renovation. The project was a complete success thanks to coordination of our in-house electrical and wireless crews, as well as our subcontractors.
