

# Verizon Wireless Carteret

McPhee Electric completed the civil and underground portion of this raw-land monopole site at the Carteret Department of Public Works facility. Highlights include a 9' diameter by 49' deep caisson foundation to support the new 120' monopole and elevated foundation for the 12' x 30' shelter. The scope also included underground power, telephone, grounding, natural gas piping, and site work to support the new cell site. Environmental concerns also posed an additional challenge for the construction of this site.
